

Office of Facilities Management

Capital Projects and Planning Department

Project Number: 6005

Schedule: Summer 2007

Title: Academic Building Tunnel Repairs

Architect: TRO Jung/Brannen

General Contractor: Webster Construction

Project Manager: James Reilly

Newly poured concrete stairs

The repair of the tunnel from the Academic Building to the Harrington Building will improve the quality of the traverse for handicapped students. The existing tunnel has had continuous problems with water leakage from the outside. The water leakage has occasionally wreaked havoc with the chair lift from the tunnel into the basement of the Academic Building.

The repairs include the excavation and waterproofing of the tunnel and the replacement of the chair lift device.

- ◆ Equipment will be delivered in August.
- ◆ Inspections Completed on September 9.
- ◆ Substantial completion June 30.
